DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1 – 6 and 11 - 16, drawn to a method and apparatus in a DSP architecture that comprises a three by three matrix of memory elements with a computing element in the middle, classified in class 711, subclass 173.
 - II. Claims 19 – 23 and 27, drawn to an arrangement of memories that are of one type of device and plural calculation units that are of different type of device having a plurality of connections to the memory devices, classified in class 712, subclass 11.
 - III. Claims 24 – 26, drawn to a DSP architecture with plural image segmentation units, classified in class 345, subclass 502.
2. Inventions I, II and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct if they do not overlap in scope and are not obvious variants, and if it is shown that at least one subcombination is separately usable. In the instant case, subcombination I has utility that is separate from subcombination II such as in a parallel processing matrix computer where all processing elements are of the same type. Subcombinations I and II can be used in applications other than image processing or image segmentation as required for subcombination III. They can be used in any type of multiprocessing system. Subcombination II is not required to be configured in a matrix arrangement that is required for subcombination I. See MPEP § 806.05(d).

The examiner has required restriction between subcombinations usable together. Where applicant elects a subcombination and claims thereto are subsequently found allowable, any claim(s) depending from or otherwise requiring all the limitations of the allowable subcombination will be examined for patentability in accordance with 37 CFR 1.104. See MPEP § 821.04(a). Applicant is advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application.

3. Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions require a different field of search (see MPEP § 808.02), restriction for examination purposes as indicated is proper.

4. Because Applicant already received an action on the merit, the next office action may be final.
